

DECONTAMINATION BAG

# Firefighting Decontamination Solutions

DECON INTERNATIONAL PTY LTD

## THE ISSUES

To find out more or order register your interest, visit our website.

### Product Overview

DECON International identified an issue with off gassing of dirty turnout gear and equipment during transit/transition and have developed a large sealed dry bag as a preventative measure for the encapsulation of contaminated turnout gear and equipment.

The DEKONMATE Decontamination Bag has been designed for the Transport of Turnout Gear / BA Sets / Hoses and other contaminated items from the scene to the station on the appliance and then from the station to the laundry in a sealed encapsulated environment to prevent off-gassing.

Dermal contact and off gassing are key contaminant exposure risks.

Research has shown that improving equipment decontamination procedures can reduce exposure risk.

# CONTAMINATED GEAR & EQUIPMENT SEALED TRANSIT BAG

Product Information Sheet

## DEKONMATE Decontamination Bags are:

- ▶ Heavy duty and designed for a 50kg load and have a dry bag sealed fold down top with ergonomically positioned handles for ease of lifting.
- ▶ Provided with an open sided plastic pouch on the front for owner / content identification documentation. The documentation can be colour coded to identify the status, green = clean /red = dirty contents.
- ▶ Environmentally friendly eliminating the need for single use plastic bags.
- ▶ Suitable for individual officers to use to transport operational uniform home for personal laundry, transport clean turnout gear when moving between work locations or when on operational deployment, preventing any off gassing in personal or department vehicles.
- ▶ Product Code: DEDB0105

## PROCEDURE

Following is a series of photos of the bag and its application:
